

DESTU

Direct entry sealed termination unit for use with the Heat Trace range of heating cables

TERMINATION SYSTEM

- Available for use in safe and hazardous areas
- Eliminates the risk of damage to heating cables at termination points
- May be used for power connection, in-line and tee-splicing
- Preferred termination method for the Heat Trace EVOLUTION design software

FEATURES

The DESTU is a direct entry sealed termination unit for use with the majority of the Heat Trace range of self-regulating, and constant wattage heating cables.

It has been designed specifically to reduce the risk of damage to heating cables at termination points, thus avoiding the need to expose the heating cable as it emerges from the thermal insulation for connection into the junction box.

The DESTU may be used for power termination, in-line splice and tee splice terminations. When the RTD version of the unit is ordered, it is also suitable as a means of temperature sensing at various point along the length of heated pipework.

The DESTU is approved for use in non-hazardous and hazardous locations to EN EuroNorms.

OTHER EQUIPMENT NEEDED

Junction Box

The suggested junction box for use with the DESTU system is the DJB9000. This style of junction box provides ample room inside for connecting the heating cables and earth wiring. The DJB9000 comes complete with the necessary terminal blocks and is drilled with a 1" clearance (M33) entry to accept the DESTU. However, almost any style of junction box, provided it is drilled with a suitably sized DESTU entry, may be used.

DESTU Seals

Seals are required that have been specifically designed to seal correctly on the Heat Trace range of heating cables. The seals are positioned within the DESTU base and provide a means of passing the heating cable safely through the DESTU and into the chosen junction box. Refer to Heat Trace's comprehensive listing of the seal sizes needed for specific heating cables.

End / Power Seals

Termination seals are required to provide a method of safe power and end termination of a heating cable. A tube of RTV silicone sealant is also necessary. One tube for 6 seals is usually sufficient. If the surface temperature is likely to exceed 150°C, the DES end seal arrangement is recommended.

Pipe Fixing Straps

Heat Trace suggest that the PFS range of pipe fixing straps is the most suitable method of holding the DESTU in position on the pipework. Refer to the table provided overleaf for details. Two PFS fixing straps are required per DESTU.

OPTIONAL EQUIPMENT

A Pt100 RTD sensor may be purchased to enable the DESTU to be used as a pipe temperature sensing unit. See overleaf for details.

The DESTU may also be used in a tee-splice arrangement when additional components are ordered. See overleaf for further details.

A heat break Type HBR is required should the potential pipe temperature exceed 180°C (limit 250°C).

SPECIFICATION

MAXIMUM EXPOSURE TEMPERATURE	180°C (356°F)
	[†] See note below about use of heat break
MINIMUM OPERATING TEMPERATURE	-65°C (-85°F)*
MINIMUM INSTALLATION TEMPERATURE	-40°C (-40°F)
DESTU DIMENSIONS (LxWxH)	110 x 114 x 42mm
IP RATING	IP54
HEAT BREAK TEMPERATURE	Minimum -45°C (-4.9°F) Maximum 250°C (482°F)
HEAT BREAK SIZE (LxWxD)	130mm x 60mm x 35mm
SENSOR CONSTRUCTION	Stainless steel tube with PTFE insulated wires and Pt100 RTD sensor.

APPROVAL DETAILS

Testing Authority	Certificate No's.
ATEX	 02ATEX3081U
CSA	 1350782; 1352981; 1295278; 1547590; 1495802
EAC*	 TC RU C-GB.ГБ05.B.00191

ORDERING INFORMATION

Cat Ref	Description
DESTU	DESTU 'top' and 'base' sections complete with locking ring, fibre washer, blank seal, screw, shakeproof washer, instructions & caution label
HB	Silicone rubber & mineral wool heat break
DRTD	RTD sensor and seal for DESTU
DESnx	DESTU end seal kit used if the maximum pipe temperature could exceed 150°C ('n' indicates number of heaters to be taken through the DESTU, 'x' indicates the BES end boot size)
DESTU/T	Tee-splicing components including LEK/U lagging entry kit (separate product specific gland kit (PGSn or BGSn) also required).
DSn	DESTU seal ('n' indicates nos 1 to 5)
PGSn	Plastic gland kit ('n' indicates nos 1 to 5)
BGSn	Brass gland kit ('n' indicates nos 1 to 3)
BPSn	Silicone boot power seal ('n' indicates nos 4 to 5)
BESn	Silicone boot end seal ('n' indicates nos 4 to 5)
PFS025	Pipe fixing strap for <= 2" (50mm) pipework
PFS050	Pipe fixing strap for <= 5" (127mm) pipework
PFS100	Pipe fixing strap for <= 10" (254mm) pipework
PFS200	Pipe fixing strap for <= 24" (635mm) pipework

Note: 2 x PFS pipe fixing straps are required per DESTU unit

[†] Maximum pipe surface temperature when the heat break is used is 250°C (482°F).
Maximum pipe surface temperature without the heat break is 180°C (356°F).
We recommend use of a heat break for DESTU and silicone end seals on pipes intended for operation in the range 150°C - 250°C.
